General Disease Prediction based on symptoms provided by patient- powered by

Django & Machine Learning

How To Use This

First make sure PostgreSQL and pgadmin is install in your system. then you have to manually create a DB instance on PostgreSQL named "predico", better use PgAdmin for that. make a new environment(recommended) and run...

Run pip install -r requirements.txt to install dependencies

Run python manage.py makemigrations  
Run python manage.py migrate  
Run python manage.py runserver  
Navigate to <http://127.0.0.1:8000/> in your browser  
Dataset used -
